FAT CAVITATION

What is fat cavitation?

Ultrasound liposuction (ultrasound cavitation) is a new, revolutionary fat removal technique using targeted ultrasound waves that melt fat into fatty acids safely and allow them to be processed by the normal body's process.

Our machines are extremely powerful and our process is very unique as it combines ultrasound, light therapy and radio frequency followed by lymphatic drainage to ensure optimum results, all helping to reduce fat but also tones and tightens the skin, improves skin texture, reduces cellulite and improves body shape as well.

The more sessions the greater all these benefits are amplified. We recommend programs between 6-10 treatments, depending on your BMI and have put together special offer packages for this.
